

Central Valley Flood Protection Board

Executive Officer Delegation Report

Posting Date: February 12th, 2024

Number of Applications Scheduled: 2

Application Number: 19647-1

Applicant: William Millie

Location Description: The project is located approximately 2 miles south of the community of Courtland, approximately 300 feet downstream from the confluence with Steamboat Slough.

County: Sacramento

Stream: Sacramento River

Project Description: To install a 3-inch diameter conduit through the right (west) bank levee of the Sacramento River. The conduit will be installed from an existing landside PG&E power pole, buried along the landside levee slope, and under the levee crown then connected to a splice box on the waterside levee shoulder.

LMA Endorsement: Reclamation District 3

CEQA Finding: The Board has determined the project is exempt from CEQA under the Class 4, Minor Alterations to Land categorical exemption (CEQA California Code of Regulations, Title 14, Section 15304) because the proposed activity consists of installing a conduit from an existing PG&E line to be buried along the landside levee slope and under the levee crown which does not involve removal of healthy, mature, scenic trees. The project is also exempt under the Class 3, New Construction or Conversion of Small Structures categorical exemption (CEQA California Code of Regulations, Title 14, Section 15303) because the proposed activity consists of the extension of an existing PG&E powerline via a conduit to a splice box to power a recreational boat dock area. Further, none of the exceptions to the exemption in CEQA California Code of Regulations, Title 14, Section 15300.2 apply.

Application Number: 19706

Applicant: Yuba Water Agency

Location Description: The project is located on the waterside of the right (north) bank levee of Simmerly / Jack Slough, approximately 0.1 miles south of the intersection of State Highway 70 and Laurellen Road, north of the City of Marysville.

County: Yuba

Stream: Simmerly Slough

Project Description: To construct and install a solar powered remote terminal unit (RTU) on top of a 3-foot by 3-foot concrete pad; installing approximately 140 feet long 2-inch diameter rigid metal conduit 2 feet deep, that runs underground from the RTU to Simmerly / Jack Slough; and installing 8-foot long staff gauge. Additional improvements include installing bollards 36 inches deep and pipe markers 12 inches deep.

LMA Endorsement: Reclamation District 10

CEQA Finding: The Board has determined the project is exempt from CEQA under the Class 4, Minor Alterations to Land categorical exemption (CEQA California Code of Regulations, Title 14, Section 15304) because the proposed activity consists of installing a remote terminal unit, burying metal conduits, constructing concrete pads, and mounting 8-foot-tall staff gauges into the low water channel at the channel toe and does not include the removal of healthy, mature, scenic trees. The project is also exempt under the Class 6, Information Collection categorical exemption (CEQA California Code of Regulations, Title 14, Section 15306) because the proposed activity consists of the installation of flow monitoring stations for data collection and does not result in a serious or major disturbance to an environmental resource. Further, none of the exceptions to the exemption in CEQA California Code of Regulations, Title 14, Section 15300.2 apply.
